Front-End Developer Teacher of Mathematics Manager

based in Antwerp, Belgium

Liudmyla Leroy

I love children and numbers.

As a mathematician, I see the beauty of this world.

As a physicist, I see the foundations of existence.

As a teacher, I strive to improve everything, first of all myself.

As a programmer, I create, fill, develop, get to know this world even more.

What am I looking for?

I am looking for a team of like-minded people with whom I will feel comfortable working and doing good and useful things.

Now I would prefer programming in a company as an intern to start with.

But I also like to analyze and plan as an economist. End like to teach and organize.

What I can do for you?

As an economist, founder and manager, I worked in the field of:

- logistics (road transport),
- construction (highways, metal-plastic structures, external and internal repairs of buildings),
- education (lessons of mathematics, computer science, geography and astronomy, fashion show lessons, acting skills , design and tailoring, photo posing).

I produced ideas, organized processes, conducted active communication with partners, drew up contracts, statutory documents, developed tariff grids for salaries, calculated calculations, formed the price, forecasted the economic success of the company's possible actions.

Act quickly and accurately in critical situations.

As a web developer, I can create sites using HTML, CSS and frameworks, adapt them for different devices. Acquaintance with Figma. I study JavaScript hard. My university knowledge of algorithms, basics of Java helps a lot. I love if-else, I know operators, loops, arrays well. I work with API. I know Vanilla JavaScript better and I'm learning React.

Portfolio
